

Did you know?

Use our kidney facts and figures to raise awareness about kidney health

Take our quick fun quiz and test your kidney health knowledge!

NCDs

such as kidney disease are the most common causes of premature death worldwide

An estimated 80% of this burden occurs in low- or middle-income countries

Double the number of people who live with diabetes (422 million), cancer (42 million), or AIDS/HIV (36.7 million) worldwide

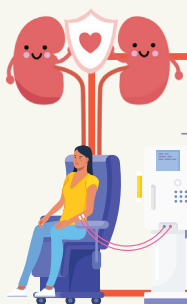

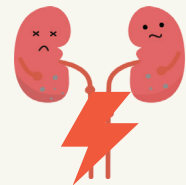

850

million people worldwide have some form of kidney disease

CKD

The prevalence of CKD worldwide is 10.4% among men and 11.8% among women

AKI is experienced by 13.3 million people each year and may resolve or lead to CKD or kidney failure in the future

Between 5.3 and 10.5 million require dialysis or transplantation, but many do not receive it due to a lack of resources or financial barriers

2,6

million receive treatment, the majority in 5 countries (US, Japan, Germany, Brazil, and Italy)

COSTS

Dialysis and transplantation costs consume up to 3% of the annual health care budget in high-income countries

Prevention is key to reducing the human and economic costs of CKD and ESKD
